1 OR 2 LETTER PLATES

ONE OR TWO LETTERS FOLLOWED BY ONE TO FOUR NUMBERS OR REVERSE

These plates are rare and are normally only seen on newer vehicles as cherished or personalised numbers. However, some still exist and were originally issued to vehicles first registered between 1903 and the mid 1930's. The reverse (where the one or two letters follow the numbers) are very rare - only a few of these were issued in the 1950's / 60's when three letter plate combinations ran out.

The one or two letters, in the above example AB, make up the 'area identifier' and indicate where the vehicle was first registered. Area identifiers for vehicles first registered from 1 September 2001 are different to those used with this system.

If the plate is reversed, e.g. 1234AB, the two letters (AB) are still the area identifier.

The numbers, in the above example 1234 are the individual element which give the vehicle its unique identity. The numbers are issued in sequence from 1 to 9999. Not all possible combinations of these plates were issued - and many have since been sold on as cherished numbers.

Although this series of plates has long since ceased being issued to new vehicles, it is still in use for re-registrations for pre-1931 ('vintage') vehicles which need new plates. The current series being used for re-registrations is SV8000 - SV9999 which was never originally issued.

3 LETTER PLATES BEFORE 1963

THREE LETTERS, ONE TO THREE NUMBERS OR REVERSE

On cars first registered before 1963 (or 1965 in some cases), number plates look like this. The plates usually carry the three letters before the numbers between 1 and 999, but some are reversed with the numbers preceding the letters.

In the group of three letters, the second and third letter, in the above example BC, make up the 'area identifier' and indicate where the vehicle was first registered. Area identifiers for vehicles first registered from 1 September 2001 are different to those used with this system.

If the plate is reversed, e.g. 123ABC, the second two letters (BC) are still the area identifier.

The first letter and numbers, in the above example A__ 123 are the individual element which give the vehicle its unique identity. The numbers are issued in sequence from 1 to 999. The letter (called the serial letter) is issued in sequence, usually when all possible numbers have been used up, so ABC1 would be followed by ABC2, up to ABC999 when the next issue would be BBC1. Not all possible combinations of these plates were issued - and many have since been sold on as cherished numbers. Reversed plates follow the same format, so 999ABC would be followed by 1BBC then 2BBC etc.

Although this series of plates ceased being issued to new vehicles between 1963 and 1965, it is still in use for re-registrations - that is, older vehicles which need new plates. The current series being used for re-registrations is ASL100 - YSL999 which was never originally issued.

PLATES 1963 - 1983 (YEAR SUFFIX)

THREE LETTERS, ONE TO THREE NUMBERS, ONE LETTER

This is the format of registration used on vehicles first registered between 1963 and 1983.

The second two letters, in the above example BC, are the 'area identifier' and indicate where the vehicle was first registered. Area identifiers for vehicles first registered from 1 September 2001 are different to those used with this system.

The last letter, in the above example A, is the 'age identifier' or 'year letter' and shows the date when the vehicle was first registered - in this case during 1963. Year letters were not compulsory until 1965, so a vehicle may have been registered during 1963 and 1964 without a year letter.

The first letter and numbers, in the above example A__ 123 are the individual element which give the vehicle its unique identity. The numbers are issued in sequence from 1 to 999. The letter (called the serial letter) is issued in sequence, usually when all possible numbers have been used up, so ABC1A would be followed by ABC2A, up to ABC999A when the next issue would be BBC1A. Usually, prior to 1974, the change in year letter did not affect the plate sequence so ABC123G would be followed by ABC124G or

ABC124H depending on which year letter applied at the time. After 1974 the serial letter and numbers usually 'reset' with the change of year letter so if Hxx923N was the last plate issued in a series for the "N" suffix period, it would be followed by Jxx1P. This was not always the case, however, and for registration offices with many area codes, every area code combination with the same serial letter would be used before the serial letter advanced.

Although this series of plates ceased being issued to new vehicles in 1983, it is still in use for re-registrations - that is, older vehicles which need new plates.

PLATES 1983 - 2001 (YEAR PREFIX)

ONE LETTER, ONE TO THREE NUMBERS, THREE LETTERS

This is the registration system used prior to the current one and most of the vehicles on Britain's roads today display a plate of this type.

The first letter, in the above example A, is the 'age identifier' or 'year letter' and shows the date when the vehicle was first registered - in this case between 1 August 1983 and 31 July 1984.

The last two letters, in the above example BC, are the 'area identifier' and indicate where the vehicle was first registered. Area identifiers for newer vehicles are different to those used with this system.

The numbers and second letter, in the above example 123 A, are the individual element which give the vehicle its unique identity. The numbers are issued in sequence from 21 to 998, with some being withheld for select (personalised number plate) use only. The second letter (called the serial letter) is issued in sequence, usually when all possible numbers and area codes (if an office has more than one) have been used up. On 1 August 1996, for example, new vehicles in NW London were issued plates from P21LLA. When the series had reached P998LLA the next registration to be issued was P21LLB - the next NW London area code - until all possible NW London area codes were used and the series returned to LA with the serial letter advancing, P21MLA. On 1 August 1997, the "P" age identifier was replaced with the "R" age identifier but not all possible serial letters had been used - the LA series had reached PLA.

Although this series of plates ceased being issued to new vehicles in September 2001, it is still in use for re-registrations - that is, older vehicles which need new plates.

PLATES FROM 1 SEPTEMBER 2001

TWO LETTERS, TWO NUMBERS, THREE LETTERS

This is the current vehicle registration system used in the UK, used on vehicles first registered from 1 September 2001.

The first two letters, in the above example AB, are the 'area identifier' and indicate where the vehicle was registered - the first letter "A" represents the general area (in this case Anglia) and the second letter "B" represents the town or city in this area where the vehicle was registered (not where the owner lives or the vehicle may reside!). The area identifiers used with the current system are different to those used prior to 2001.

The two numbers, in the above example 51, are the 'age identifier' and indicate when the vehicle was first registered - in this case between 1 September 2001 and 28 February 2002.

The three letters, in the above example CDE, are the individual element which give the vehicle its unique identity. The letters are issued roughly in sequence, but some combinations are banned because they are deemed to be offensive. Some are also withheld from issue because they are reserved for select issues (personalised number plates) - these are usually combinations or letters which spell names or words. Some combinations in a sequence are also omitted to prevent dealers from reserving potential 'favourites' for customers without going through the 'select' (personalised) scheme. For the first time on the UK mainland, the letter Z is permitted, but only for the serial letters. Area codes cannot contain the letter Z as they are used for Northern Ireland.

A plate may carry the GB "Euro" symbol on the left hand side, any symbol displaying other than "GB" and / or other than the EU "stars" logo is not permitted.

HISTORY OF UK CAR REGISTRATION

The UK car registration system traces back to 1903. The Motor Car act which came into force on January 1st, 1904 required all vehicles in the United Kingdom to be registered and carry number plates. Originally County and Borough Councils were to issue the number plates - a system which was to last until 1974 - when the Department of Transport took over the task with it's specially equipped Vehicle Registration Offices (VROs).

A1 - YY9999 : 1903 - 1930's

Each council was issued with one or more letter codes for registering vehicles. Originally both one and two letter codes were issued as of 1903. A list of these codes and the areas they apply to can be found on the area identifier pages. This original system, using the one or two letter area code and one to four numbers (e.g. AA1 - AA9999) soon ran out and by the 1930's a change was needed.

AAA1 - YYY999 : 1930's - 1960's

It was decided an extra serial letter was to be introduced prefixing the original area code. This could only be used with two letter area codes, as prefixing a one letter area code would duplicate a two letter code, so the single letter area codes became obsolete. Serial letters were first introduced around 1932 as necessary.

In order for the size of the plates to remain the same, a maximum of only three numbers (e.g. AAA234, GRF823) was used with this system. This serial letter ran in rotation with the numbers, so in the example ADE998, the "DE" is the area code (in this instance, Pembrokeshire County Council), and the A--998 runs in sequence. The next number in the Pembrokeshire series would be ADE999, followed by BDE1 (note that no zeroes prefix the number 1).

1AAA - 999YYY : 1950's - 1960's

In the 1950's the system was reversed by councils who had run out of combinations in the previous series, now with the numbers prefixing the letters (e.g. 237RYU). A small number of councils ran out of these numbers by the late 1950's / early 1960's and as a temporary measure, four number / one or two letter area code registrations were issued (e.g. 2345AA). These did not have a serial letter, the one or two letters being the area codes as originally issued in the reversed format. Only the single letter area codes D,E,F,H,K,N,R,U and W were issued in this reversed format (e.g. 1042D) between 1953 and 1962. This was the last time the single letter area codes were used. Not all of these numbers were issued, making this type of number rarer than the ABC123 type. Some of these numbers are now being auctioned off as personalised registrations.

AAA1A - Y999YYY : 1963 - 2001

By the 1960's, some of the busier councils began to run out of numbers again and it was clear an extra letter or number was needed on the plates. From 1963 the suffix letter "A" was added to the registrations of some busier councils (e.g. NAT233A), the letter changed to "B" in 1964 and so on. Not all councils used the "year suffix letter" until 1965 when the "C" suffix was issued and the addition of the year letter became compulsory. On 1 October 1974, registrations were centralised, and some area codes changed.

In 1983, the year letter suffix system ran out and it was replaced with a year letter prefix system. This system operated in the same format, but reversed (e.g. A234UUV). There is more information about these year suffix and prefix codes on the age identifier pages. The suffix and prefix letters I,O,Q,U and Z have not been used. The year prefix system ran out with the "Y" prefix on 31 August 2001.

PLATES 1983 - 2001 (YEAR PREFIX)

This is the registration system used prior to the current one and most of the vehicles on Britain's roads today display a plate of this type.

The first letter, in the above example A, is the 'age identifier' or 'year letter' and shows the date when the vehicle was first registered - in this case between 1 August 1983 and 31 July 1984.

The last two letters, in the above example BC, are the 'area identifier' and indicate where the vehicle was first registered. Area identifiers for newer vehicles are different to those used with this system.

The numbers and second letter, in the above example 123 A, are the individual element which give the vehicle its unique identity. The numbers are issued in sequence from 21 to 998, with some being withheld for select (personalised number plate) use only. The second letter (called the serial letter) is issued in sequence, usually when all possible numbers and area codes (if an office has more than one) have been used up. On 1 August 1996, for example, new vehicles in NW London were issued plates from P21LLA. When the series had reached P998LLA the next registration to be issued was P21LLB - the next NW London area code - until all possible NW London area codes were used and the series returned to LA with the serial letter advancing, P21MLA. On 1 August 1997, the "P" age identifier was replaced with the "R" age identifier but not all possible serial letters had been used - the LA series had reached PLA.

Although this series of plates ceased being issued to new vehicles in September 2001, it is still in use for re-registrations - that is, older vehicles which need new plates.

YEAR IDENTIFIERS

Year letters were introduced in 1963 with the "A" suffix. This was not used by all councils, however, and didn't become compulsory until the "C" suffix in 1965. Initially the year suffix was changed on the 1st January every year, but the motor industry soon discovered that there was a rush for cars during the new year period, as everyone wanted to own a car with the latest year identifier. The year suffix change was moved in 1967 to August where it was hoped that the demand for new vehicles would be met more easily.

In 1983, the year suffixes ran out and the system was reversed, so the year identifier was the first letter on the number plate. This is the system we still have in use in Britain today. In March 1999, the system of changing the year identifier was moved to a twice yearly change, to prevent the annual rush to buy new vehicles in August. The series ran out of letters in September 2001 which is when the current system was introduced using a new system of year numbers.

The "Q" prefix has been issued since 1 August 1983, to vehicles of undeterminable age (e.g. kit cars, rebuilds etc). If you buy a new car in Britain today, you will receive the "53" age identifier - e.g. AB53 CDE

AGE IDENTIFIERS FROM 2001

The age identifier (year number) is the number in between the two groups of letters - e.g. AB51 CDE

01	not used	51	1 Sep 01 - 28 Feb 02
02	1 Mar 02 - 31 Aug	02	52 1 Sep 02 - 28 Feb 03
03	1 Mar 03 - 31 Aug	03	53 1 Sep 03 - 28 Feb 04
04	1 Mar 04 - 31 Aug	04	54 1 Sep 04 - 28 Feb 05

YEAR LETTERS: SUFFIXES 1963-83

This table shows the year letter SUFFIXES - where the year letter is the LAST letter of the registration number - e.g. "TBX182S" - the letter "S".

A 1963	H 1 Aug 69 - 31 Jul 70	R 1 Aug 76 - 31 Jul 77
B 1964	J 1 Aug 70 - 31 Jul 71	S 1 Aug 77 - 31 Jul 78
C 1965	K 1 Aug 71 - 31 Jul 72	T 1 Aug 78 - 31 Jul 79
D 1966	L 1 Aug 72 - 31 Jul 73	V 1 Aug 79 - 31 Jul 80
E 1 Jan 67 - 31 Jul 67	M 1 Aug 73 - 31 Jul 74	W 1 Aug 80 - 31 Jul 81
F 1 Aug 67 - 31 Jul 68	N 1 Aug 74 - 31 Jul 75	X 1 Aug 81 - 31 Jul 82
G 1 Aug 68 - 31 Jul 69	P 1 Aug 75 - 31 Jul 76	Y 1 Aug 82 - 31 Jul 83

Note that the year suffixes I, O, Q, U, and Z have not been issued. This is because the letters I and Z are not used in the British numbering system as they are reserved for Northern Ireland which uses a different system, Q is not used in the British system ("Q" prefixes are used to show vehicles of indeterminable age), and O could be mistaken for the number zero. The reason for the omission of the "U" suffix and prefix remains a mystery!

YEAR LETTERS: PREFIXES 1983-2001

This table shows the year letter PREFIXES - where the year letter is the FIRST letter of the registration number - e.g. "X451BLE" - the letter "X".

A 1 Aug 83 - 31 Jul 84	H 1 Aug 90 - 31 Jul 91	R 1 Aug 97 - 31 Jul 98
B 1 Aug 84 - 31 Jul 85	J 1 Aug 91 - 31 Jul 92	S 1 Aug 98 - 28 Feb 99
C 1 Aug 85 - 31 Jul 86	K 1 Aug 92 - 31 Jul 93	T 1 Mar 99 - 31 Aug 99
D 1 Aug 86 - 31 Jul 87	L 1 Aug 93 - 31 Jul 94	V 1 Sep 99 - 29 Feb 00
E 1 Aug 87 - 31 Jul 88	M 1 Aug 94 - 31 Jul 95	W 1 Mar 00 - 31 Aug 00
F 1 Aug 88 - 31 Jul 89	N 1 Aug 95 - 31 Jul 96	X 1 Sep 00 - 28 Feb 01
G 1 Aug 89 - 31 Jul 90	P 1 Aug 96 - 31 Jul 97	Y 1 Mar 01 - 31 Aug 01

Note that the year prefixes I, O, U, and Z have not been issued. The "Q" prefix has been issued since 1983 to vehicles of indeterminable age.

NUMBER PLATES

Since 1973, a UK number plate should be white reflective plastic with black type for the front of the vehicle and yellow reflective plastic with black type for the rear of a vehicle.

Prior to this, car numbers were normally white or silver type on a plain black background, cars registered before 1973 can still display either type of plate. One interesting and less documented change is that from stick on plastic block lettering which is slightly raised from the surface, to flat lettering which is sealed within the plate which happened from the early 1980's.

Plates on vehicles registered before 1 Sep 2001 (new system), character width of either 57mm wide is legal; but post - Sep 2001 registrations must use characters that are 50mm wide and not 57mm. The standard font is the Charles Wright font - non standard typefaces are illegal. The GB Euro symbol is permitted but all other symbols are also banned. Since 1 Sep 2001, all replacement plates bought carry the new, narrower 50mm version of the typeface.

MILITARY PLATES IN THE UK

All UK military vehicles have plates which consist of 2 numbers, 2 letters and then 2 numbers e.g. 24 KA 51, or since 1995, the reverse e.g. KA 24 AA - these are on standard sized plates in the standard font although usually still white or silver characters on black plates. This current practice commenced in 1949.

Between 1982 and 1995, military vehicles used 2 numbers, the letter K and another letter, then 2 numbers - e.g. 24 KA 51. However prior to 1982 different codes were used. The series 53 ER xx is used by the Queen's official baggage transport - with 53 representing 1953, the year of Her Majesty's coronation, ER representing Elizabeth Regina and then two numbers (xx).

US forces present in the UK may have special plates on their military vehicles, in British style and size. These plates include the series DOT, RC, UKAX, USAF, USN, AFEX, UKER. These plates have the letter codes followed by (normally) four or five numbers. USN has not been issued on standard plates to avoid confusion. US forces plates have also been spotted in the UK style with just numbers, e.g. 93-40342, two serial letters and four numbers.

DIPLOMATIC PLATES

Since 1979, diplomatic plates (above left picture) have been issued with three numbers (representing the diplomatic Embassy), the letter D (diplomat) or X (accredited personnel), and three serial numbers (101 - 399 for diplomats, 400 - 699 for non diplomatic staff and 700 - 999 for consular staff). The numbers on diplomatic plates are in a slightly narrower, distinctive font compared to those on a normal UK plate, however the colours and size remain the same. Some diplomatic plates also exist in the normal series, such as USA 1, CAN 1 etc. These may include the letters I, Q and Z, and almost always have a single 1 as the numeral.

TRADE PLATES

Trade plates use the normal UK font but usually display red letters on a white background. They have three numbers starting from 001, and then a two letter area code of the VRO (vehicle registration office) as in pre September 2001 plates. Trade plates are carried by vehicles which are not being currently taxed, and are used by dealers and manufacturers. These plates can be moved from one vehicle to another which is why they are often displayed in the windscreen or hung from the vehicle rather than being permanently fixed.

Q CODES : TEMPORARY IMPORT SERIES

Q codes are not "area" codes - but codes which show that a vehicle has been temporarily imported. The code contains up to four serial numbers, the letter Q and then the year letter or, since 2001, number (e.g. 1234QX during 'X' registration, or 175Q02 during '02' registration). Prior to 1983, this was reversed, with the letters preceding the serial numbers (e.g. QX1234). This system started in 1981 with the QX prefix.

Q code prefixes were introduced in 1921, and until 1981 the second letter of the Q code was not a year letter, but a code letter which identified the licensing authority which issued the mark. QC, QD, QH, QN, QS prefixes were issued by the RAC, QQ and QR were issued by the Greater London Council and the rest (except QO, QU - QZ) were issued by the AA. QX was the first year letter prefix, which ran with the X suffix in 1981/2, and QY prefix ran with the Y suffix in 1982/3. The system was then reversed from 1 August 1983.

N.B. Not to be confused with the Q "year" prefix which identifies vehicles of unknown age/origin, and use the normal system - e.g. Q123ABC

X CODES : EU EXPORT SERIES

X codes are not "area" codes - but codes which show that a vehicle has been purchased tax free for export to the EU. There are two types of X code - those issued for vehicles whose date of first registration is before 1 September 2001 (the old system) and those issued for new vehicles and vehicles whose date of registration is on or after 1 September 2001.

The code 'XP' is used in the place of the area identifier to denote a vehicle for EU export under the old system. The vehicle then carries the appropriate year letter for date of first registration and three serial letters. The second letter is not, as normal, a serial letter but a letter between A (January) and M (December, I is not used) to show the month of purchase. So X123AXP would show a Sep 2000 - Feb 2001 vehicle, purchased in January, for export to the EU. This system was first introduced in 1993.

The new system, for vehicles first registered on or after 1 September 2001, uses the codes XA to XF, with the second letter representing the month of purchase.

ISLANDS

There are several odd features in the current system of numbering, one of which is that the islands which surround the British Isles have unique and separate numbering systems which differ from one to the other.

The Isle of Wight uses the UK system with it's own area codes - "HW" from 1 September 2001 and "DL" from 1903 to 2001.

From 1971 to 2001, the Isles of Scilly used the area code "SCY" which is withheld from use by Swansea VRO which issues the "CY" series. This has only been the case since 1971, however, and "SCY" was issued previously by Swansea without year letters and with the "G" year suffix. Since September 2001, the Isles of Scilly have used the codes "WK" and "WL" which are issued by Truro DVLA local office.

ISLE OF MAN

The Isle Of Man series can look at first glance quite confusing since it follows a pattern which is very similar to the series used on the UK mainland. The plates are the same size, colours and font as normal UK plates. The Isle of Man uses the two letter "area" code "MN", and the three letter series "MAN", both of which have been withheld from mainland issue in the UK.

The current series started in 1987 and consists of a serial letter followed by the MN code, three serial numbers and another serial letter (not a year letter). The first number issued in this series was BMN1A, then BMN2A etc. When BMN999A was reached, the next number was BMN1B; when BMN999Y was reached, CMN1A was next issued etc. From 1974 to 1987, the "MAN" code was used instead of "MN", originally MAN1A to MAN999Y then A1MAN to Y999MAN, then MAN1000 to MAN9999 and 1000MAN to 9999MAN. Before 1974, plates were much as old plates in the UK with "MAN" and "MN" used with numbers and no serial letters or a serial letter prefix for "MN" (e.g. MAN283, MN8193, and later BMN982 etc.) The letters I,Q,S, and Z are not used, and the combination "AMN" appears never to have been issued. It is important to remember that the serial letter prefixes and suffixes used on the Isle of Man are not year letters, as on the UK mainland.

PERSONALISED & CHERISHED NUMBERS

A cherished number can be any registration number that has previously been issued. Some people like to transfer their existing number from their old vehicle when they replace it for reasons of memorability, or simply because they liked it. You are able to transfer a vehicle registration with an older age identifier onto a newer vehicle but not the reverse (so you could put a registration initially issued in 1982 on a 1994 car, but not a 1994 registration on a 1982 car).

Personalised numbers are a newer idea than cherished registrations and allow certain numbers to be reserved from normal use for sale at auction to raise money. Under this scheme since 1983, various numbers including 1 - 20, have been withheld from normal registration plates for sale, along with other combinations which phonetically spell out names or words. Since the "W" prefix (1 March 00) more numbers have been withheld for personalised use. Some of these have yet to be issued, see New-reg.co.uk for more details about personalised and cherished number plates, or to search and buy online.

The ten numbers which have raised the most money at auction have been KINGS, 1A, 1RR, 1S, GILLY, PILOT, 1DM, 1J, ELVIS and NIGEL.

These numbers have been withheld from issue on all normal registrations, being reserved for personalised use (this is only a rough guide, others may be withheld)-

1983 "A" prefix to 1989: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20

1989 to 2000: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 22, 30, 33, 40, 44, 50, 55, 60, 66, 70, 77, 80, 88, 90, 99, 100, 111, 200, 222, 300, 333, 400, 444, 500, 555, 600, 666, 700, 777, 800, 888, 900, 999

Since 2000, "W" prefix: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 25, 30, 33, 40, 44, 45, 50, 55, 60, 66, 70, 77, 80, 88, 90, 99, 100, 111, 147, 164, 190, 200, 205, 213, 216, 222, 230, 240, 250, 260, 280, 300, 309, 316, 318, 320, 323, 325, 328, 333, 340, 350, 360, 400, 405, 412, 420, 440, 444, 450, 480, 500, 505, 518, 520, 525, 530, 535, 555, 560, 600, 635, 666, 700, 735, 777, 800, 820, 827, 850, 888, 900, 911, 924, 928, 944, 999

A plate showing any of these numbers (provided after the date shown above) is a personalised registration and therefore the AREA CODE and (in some cases) the YEAR LETTER are not accurate. The numbers withheld from 1983 - 89 were not originally available at that time, being released at later dates - "E" and "F" prefixes are still to be released by the DVLA.

1903 - 1962 AREA CODES : 1 LETTER

This table shows the original 1903 single letter area codes which were used as a prefix with up to four numerals (e.g. H7823). The date given is the date when all possible combinations with that letter were used up and it ceased to be issued. From 1953 to 1962, some of these (D, E, F, H, K, N, R, U, W) were re-issued by their original counties in a reversed "suffix" format (e.g. 7823H).

RE - REGISTRATION

Re-registration is the term for what happens when a vehicle receives a new registration mark - usually because it's original mark has been sold on, or taken to a new vehicle by the previous owner.

Prior to 1 August 1983, re-registered vehicles received a mark with the current year letter. Of course this could lead to problems - such as an owner being able to pass off a vehicle as newer than it actually is to increase it's sale price! So since then the vehicle's new mark depends on the date of first registration.

Since 1963 - vehicle receives a new mark with the year identifier corresponding to the year identifier at the time of first registration, the area code being that of the office which issues the re-registered mark

1931 to 1963 - vehicle receives a standard pre-year letter mark of three letters and up to three numbers, from blocks which have previously not been issued. In this case the area code is meaningless.

Before 1931 - vehicle receives a mark of two letters and four numbers, from blocks which previously have not been issued. If the owner cannot prove the date of first registration, a "Q" year letter is given on an otherwise normal registration.

Re-registration blocks issued to vehicles first registered between 1931 and 1963:

ASV1 - YSV999, BSK1 - YSK999, CSU1 - YSU999, GVS1 - YVS999, TYJ1 - YYJ999, KFF1 - YFF999, MFO1 - YFO999, PSY1 - YSY999, ASJ101 - YSJ998, ASL101 - YSL998, AAS101 onwards (current)

Re-registration blocks issued to pre 1931 (vintage) vehicles: SVxxxx, BSxxxx

These are registrations which were not used by the appropriate councils before year letters were made compulsory, so the letters are now all issued serially and the former "area code" would not mean anything. Additional blocks have also been used, this list will be updated when these become known.

To vehicles first registered after 1963, the registration will carry the appropriate year letter and area code of the VRO. The registration received will normally follow on from the last registration issued with that year letter by that VRO. So if the last new registration issued with an "N" prefix by Maidstone VRO was N251EKP, the first re-registration with that prefix would be N252EKP. There are exceptions to this, however, where completely new serial letters have been issued which don't follow on for re-registration.

NORTHERN IRISH NUMBERS

The Northern Ireland series was originally attached to the UK series and started in 1904 following the same system as the UK, with two letters and up to four digits (e.g. DZ1423). The two letters are the area code, which in Northern Ireland features at least one "I" or "Z". When this series exhausted all possible options, it was reversed, e.g. 1423DZ (this happened in 1958).

In 1966, the present three letter (of which the last two letters are the area code) and four numeral system was first used and continues to this day (e.g. ADZ1423). Northern Ireland has never adopted the "year letter" system and won't be using the new UK system in 2001. Since 1990, vehicles re-registered in Northern Ireland receive a mark with the three letters QNI and then four numerals (e.g. QNI1423). Northern Ireland uses the same style, size and font for number plates as the rest of the UK. Other "I" and "Z" codes now withdrawn, were originally used in the Republic of Ireland, which changed it's system in 1987. Northern Ireland numbers are available to sell and buy in the cherished and personalised numbers systems.

Here's the full list of all the 2 letter area codes issued to vehicles first registered between 1903 and 2001 in the United Kingdom. These codes are (except before 1963) always issued with a preceding serial letter e.g. Y723YYX (area code is YX).

Codes were issued by County Councils to 1 October 1974, DVLA Vehicle Registration Offices (now called Local Offices) from 1 October 1974.

On a 1974/5 "N" suffix plate, the serial letters G to M (e.g. GHE782N, JGS712N etc) show the registration to have been issued after 1 October and therefore to have been issued by the VRO. Any other serial letters (e.g. RVH132N) indicate the registration was issued from 1 August 1974 up to 30 September, and therefore the area code indicates the county council pre-VRO.

None of the X series is currently in use with the exceptions-

XP - introduced January 1993
An XP code denotes not an area, but is a temporary series plate for a vehicle purchased tax free for export to another EEC country. An XP plate may look like K129BXP - where
K is the year letter as normal
129 are serial numbers
B indicates the month (A = January to M = December, no "I") and then XP.

RXS - introduced 1984
Diplomatic mark - refers to the third or subsequent vehicle owned by a diplomat - this mark is kept on the vehicle when sold. Prior to 1974, "RXS" issued by Paisley along with other XS marks.

X - Tax Free Exports

Vehicles purchased tax free for export to the EU do not display a local area code on their plates, they display an "X" code with the second letter of the code showing the month of purchase. This practice was introduced in 1993 - on pre-September

2001 cars the system uses the code "XP" with a serial letter between A (Jan) and M (Dec) for the month.
